ELSEVIER

Comput. Methods Appl. Mech. Engrg. 123 (1995) 387–391

Computer methods in applied mechanics and engineering

Subject index of Volume 123

Calculus of variations
On the numerical treatment of nonconvex energy problems: multilevel decomposition methods for hemivariational inequalities, P.D. Panagiotopoulos and M.A. Tzaferopoulos 81– 94

Control theory
Decoupling and feedback linearization via a portable symbolic code, C. Vibet 109–119

Dynamics
A dynamic contact force model for contactable cracks with static and kinetic friction, J.B. Liu, S.K. Sharan, D. Wang and L. Yao 287–298
A modeling via Hamilton's law with application to a model following resembling technique, A.Y. Raffie 63– 79
Decoupling and feedback linearization via a portable symbolic code, C. Vibet 109–119
Dynamics modeling of Lagrangian mechanisms from inertial matrix elements, C. Vibet 317–326
Numerical scheme of locating the periodic response of non-smooth non-autonomous systems of high dimensions, H. Hu 53– 62

Elasticity
A new consideration on the derivation of geometrical stiffness matrix with natural approach, J. Zhu 141–160
Convergence analysis for an element-by-element finite element method, Z. Li and M.B. Reed 33– 42
Rayleigh–Ritz analysis of elastically constrained thin laminated plates on Winkler inhomogeneous foundations, C. Cinquini, C. Mariani and P. Venini 263–286
Stress-based hierarchic models for laminated composites, E. Bertóti 327–353

Finite element and matrix methods
A dual orthogonality procedure for non-linear finite element equations, S. Krenk and O. Hededal 95–107
A dynamic contact force model for contactable cracks with static and kinetic friction, J.B. Liu, S.K. Sharan, D. Wang and L. Yao 287–298
A new consideration on the derivation of geometrical stiffness matrix with natural approach, J. Zhu 141–160
A triangular spectral element method; applications to the incompressible Navier–Stokes equations, S.J. Sherwin and G.E. Karniadakis 189–229
Analysis of the superconvergent patch recovery technique and a posteriori error estimator in the finite element method (I), Z. Zhang and J. Zhu 173–187

Bubble functions prompt unusual stabilized finite element methods, L.P. Franca and C. Farhat 299–308
Consistent infinitesimal finite-element cell method: in-plane motion, J.P. Wolf and C. Song 355–370
Convergence analysis for an element-by-element finite element method, Z. Li and M.B. Reed 33– 42
Discrete orthogonal polynomials inherent to sampling points at equal intervals, M. Okabe 371–383
Extrapolated fields in the formulation of the assumed strain elements. Part 1: Two-dimensional problems, H.K. Stolarski and Y.-I. Chen 247–262
Geometrically nonlinear analysis of plates and shallow shells by dynamic relaxation, G. Ramesh and C.S. Krishnamoorthy 15– 32
Implementation of a novel element-by-element finite element method on the hypercube, A. Sunmonu 43– 51
Incompressible flow past a circular cylinder: dependence of the computed flow field on the location of the lateral boundaries, M. Behr, D. Hastreiter, S. Mittal and T.E. Tezduyar 309–316
Optimal prestress of cracked unilateral structures: finite element analysis of an optimal control problem for variational inequalities, G.E. Stavroulakis 231–246
Pseudo-transient large deflection analysis of composite and sandwich shells with a refined theory, J.R. Kommineni and T. Kant 1– 13
Stress-based hierarchic models for laminated composites, E. Bertóti 327–353

Fluid mechanics
A triangular spectral element method; applications to the incompressible Navier–Stokes equations, S.J. Sherwin and G.E. Karniadakis 189–229
Incompressible flow past a circular cylinder: dependence of the computed flow field on the location of the lateral boundaries, M. Behr, D. Hastreiter, S. Mittal and T.E. Tezduyar 309–316

Fracture mechanics
A dynamic contact force model for contactable cracks with static and kinetic friction, J.B. Liu, S.K. Sharan, D. Wang and L. Yao 287–298

Gas dynamics
Implementation of a novel element-by-element finite element method on the hypercube, A. Sunmonu 43– 51

General Rayleigh–Ritz and Galerkin techniques
Rayleigh–Ritz analysis of elastically constrained thin laminated plates on Winkler inhomogeneous foundations, C. Cinquini, C. Mariani and P. Venini 263–286

Incompressible and near incompressible media
A triangular spectral element method; applications to the incompressible Navier–Stokes equations, S.J. Sherwin and G.E. Karniadakis 189–229
Incompressible flow past a circular cylinder: dependence of the computed flow field on the location of the lateral boundaries, M. Behr, D. Hastreiter, S. Mittal and T.E. Tezduyar 309–316

Kinematics
A modeling via Hamilton's law with application to a model following resembling technique, A.Y. Raffie 63– 79

Nonlinear dynamics of systems
Numerical scheme of locating the periodic response of non-smooth non-autonomous systems of high dimensions, H. Hu 53– 62

Nonlinear mechanics
A dual orthogonality procedure for non-linear finite element equations, S. Krenk and O. Hededal 95–107
A new consideration on the derivation of geometrical stiffness matrix with natural approach, J. Zhu 141–160
Dynamics modeling of Lagrangian mechanisms from inertial matrix elements, C. Vibet 317–326
Pseudo-transient large deflection analysis of composite and sandwich shells with a refined theory, J.R. Kommineni and T. Kant 1– 13

Numerical solution procedures
A dual orthogonality procedure for non-linear finite element equations, S. Krenk and O. Hededal 95–107
A dynamic contact force model for contactable cracks with static and kinetic friction, J.B. Liu, S.K. Sharan, D. Wang and L. Yao 287–298
A triangular spectral element method; applications to the incompressible Navier–Stokes equations, S.J. Sherwin and G.E. Karniadakis 189–229
Analysis of the superconvergent patch recovery technique and a posteriori error estimator in the finite element method (I), Z. Zhang and J. Zhu 173–187
Bubble functions prompt unusual stabilized finite element methods, L.P. Franca and C. Farhat 299–308
Consistent infinitesimal finite-element cell method: in-plane motion, J.P. Wolf and C. Song 355–370
Convergence analysis for an element-by-element finite element method, Z. Li and M.B. Reed 33– 42
Extrapolated fields in the formulation of the assumed strain elements. Part 1: Two-dimensional problems, H.K. Stolarski and Y.-I. Chen 247–262
Implementation of a novel element-by-element finite element method on the hypercube, A. Sunmonu 43– 51
Numerical scheme of locating the periodic response of non-smooth non-autonomous systems of high dimensions, H. Hu 53– 62
Pseudo-transient large deflection analysis of composite and sandwich shells with a refined theory, J.R. Kommineni and T. Kant 1– 13

Optimization
A new formulation of the problem of optimum reinforcement of Reissner–Mindlin plates, A.R. Díaz, R. Lipton and C.A. Soto 121–139
On the numerical treatment of nonconvex energy problems: multilevel decomposition methods for hemivariational inequalities, P.D. Panagiotopoulos and M.A. Tzaferopoulos 81– 94
Optimal prestress of cracked unilateral structures: finite element analysis of an optimal control problem for variational inequalities, G.E. Stavroulakis 231–246

Sensitivity-based methods for convergence acceleration of iterative algorithms, K.-Y. Choi and G.S. Dulikravich 161–172

Optimization and design of structures
On the numerical treatment of nonconvex energy problems: multilevel decomposition methods for hemivariational inequalities, P.D. Panagiotopoulos and M.A. Tzaferopoulos 81– 94
Optimal prestress of cracked unilateral structures: finite element analysis of an optimal control problem for variational inequalities, G.E. Stavroulakis 231–246

Problems in physics
Discrete orthogonal polynomials inherent to sampling points at equal intervals, M. Okabe 371–383

Shells and plates
A new consideration on the derivation of geometrical stiffness matrix with natural approach, J. Zhu 141–160
A new formulation of the problem of optimum reinforcement of Reissner–Mindlin plates, A.R. Díaz, R. Lipton and C.A. Soto 121–139
Geometrically nonlinear analysis of plates and shallow shells by dynamic relaxation, G. Ramesh and C.S. Krishnamoorthy 15– 32
Pseudo-transient large deflection analysis of composite and sandwich shells with a refined theory, J.R. Kommineni and T. Kant 1– 13
Rayleigh–Ritz analysis of elastically constrained thin laminated plates on Winkler inhomogeneous foundations, C. Cinquini, C. Mariani and P. Venini 263–286
Stress-based hierarchic models for laminated composites, E. Bertóti 327–353

Solution of differential equations
Analysis of the superconvergent patch recovery technique and a posteriori error estimator in the finite element method (I), Z. Zhang and J. Zhu 173–187
Numerical scheme of locating the periodic response of non-smooth non-autonomous systems of high dimensions, H. Hu 53– 62

Solutions of ordinary and partial differential equations
Bubble functions prompt unusual stabilized finite element methods, L.P. Franca and C. Farhat 299–308
Consistent infinitesimal finite-element cell method: in-plane motion, J.P. Wolf and C. Song 355–370

Stability in structural mechanics
Geometrically nonlinear analysis of plates and shallow shells by dynamic relaxation, G. Ramesh and C.S. Krishnamoorthy 15– 32

Structural mechanics
A dual orthogonality procedure for non-linear finite element equations, S. Krenk and O. Hededal 95–107
Convergence analysis for an element-by-element finite element method, Z. Li and M.B. Reed 33– 42

Extrapolated fields in the formulation of the assumed strain elements. Part 1: Two-dimensional problems, H.K. Stolarski and Y.-I. Chen 247–262
Optimal prestress of cracked unilateral structures: finite element analysis of an optimal control problem for variational inequalities, G.E. Stavroulakis 231–246

Subsonic flow
A triangular spectral element method; applications to the incompressible Navier–Stokes equations, S.J. Sherwin and G.E. Karniadakis 189–229

Systems of linear and nonlinear simultaneous equations
Decoupling and feedback linearization via a portable symbolic code, C. Vibet 109–119

Transport phenomena
Incompressible flow past a circular cylinder: dependence of the computed flow field on the location of the lateral boundaries, M. Behr, D. Hastreiter, S. Mittal and T.E. Tezduyar 309–316
